

Lead Software Developer

We are hiring an experienced Lead Developer who will be working in a small, experienced team to help build, maintain, and extend our SaaS platform and related systems. You will be involved in the full development lifecycle, from solution design, rapid agile developments including implementing new ideas and maintaining existing core functionality. Educating and Implementing development best practice and coding standards will also be a key part of the role.

The ideal candidate will have several years of experience as a Lead Developer in Agile software development environments. Can hit the ground running and can work collaboratively yet take accountability for development projects and deliver on time. You will have a sound understanding of and broad experience in developing web applications and the architecture, design and build of microservices (C# .NET Core).

Key Responsibilities / Skills:

- Cloud architecture (ideally GCP)
- Enterprise security using OAuth
- High volume NoSQL experience – particularly MongoDB
- The ability to lead the discussion when solving technical problems, using a palette of suitable design patterns as a basis for the solution
- Working closely with business and technical SMEs both within the organisation and third parties, to design, and with the team, to deliver solutions
- Undertaking impact assessments, sizing, solution architecture, design, and documentation, right through to delivery and quality assurance of delivered change as part of the agile delivery team
- Educating and Implementing development best practice and coding standards
- Leading an offshore team of developers
- Coaching and mentoring both onshore/offshore team members
- Enjoys working in a close-knit team

Highly Beneficial:

- Kubernetes / Docker
- Angular 2+ development
- Mobile app development
- Elastic search
- BI
- Machine Learning

Location:

Remote

Salary:

Competitive, based on experience

About P2D:

Physical2Digital (P2D) is an innovative software house based in the UK focusing on developing leading SaaS solutions, delivering change management programmes, consultancy, and technology services.

The company is looking for innovative, talented, and driven individuals to join a successful team that has great growth ambitions. You will play a crucial role in supporting businesses across various industries on their path to digitalisation in multimillion pound transformation projects.

Currently, P2D is working to revolutionise the supply chain and logistics industry. We enable supply chain transparency and provide real-time data on sustainability, fair-trade and carbon usage through cloud hosted data environments, micro services, android and IOS applications. The platform creates transparency and agility within the supply chain and simplifies Customs and SPS requirements to support the movement of goods globally. Clients include major international retailers across the Food, FMCG and Pharmaceutical industries and one of the world's leading facilities management companies. We work closely with UK and EU government bodies, including HMRC and DEFRA and are currently developing regulatory platforms that facilitate trade and support the free movement of goods with a focus on the risk-free movement.

The company is engaged on an expansion program and is looking for talented, progressively minded candidates to join a growing successful team. We focus on the development of our employees, ensuring that they have every opportunity to grow and further their skill set.

To apply for this role please email your CV to info@p2dl.com siting the job title in the subject.
