

Senior Dev Ops Engineer

We are looking for an experienced Senior Dev Ops Engineer who will be responsible for establishing and growing the Dev Ops team, while maintaining, supporting, and implementing change for our cloud-based infrastructure.

The ideal candidate will have experience effectively leading a team whilst also maintaining their own duties. You will need to be a collaborative team player who can take responsibility for the team and the quality of the infrastructure. We consider ourselves disruptors in our field so are looking for an innovative thinker who is always willing to contribute their ideas and opinions to ensure we remain at the cutting edge of the sector and deliver the best experience for our customers.

Key Responsibilities:

- Maintenance / development of cloud infrastructure
- Collaborate with developers on software requirements and standards
- Monitor system health
- Ensuring sufficient system monitoring in place
- Documenting processes / architecture
- Driving best practice in infrastructure/network administration and cybersecurity
- Assist and contribute to incident resolution as required
- Design, build and manage IaC (Infrastructure as Code) repositories
- Supporting some out of hours work

Required Skills / Experience:

- Established experience as a Senior Dev Ops Engineer
- Docker/Kubernetes/Microservices
- ELK Stack
- CI/CD
- C# .NET Core / Angular / Python
- Configuration management
- Keen to develop and learn rapidly
- Excellent communication skills both oral and written

Highly Beneficial:

- Google Cloud Experience – specifically GKE
- IaC (Infrastructure as Code)
- Disaster Recovery
- Mongo / Postgres / SQL
- API Gateway experience
- Experience leading a team

Location:

Remote

Salary:

Competitive, based on experience

About P2D:

Physical2Digital (P2D) is an innovative software house based in the UK focusing on developing leading SaaS solutions, delivering change management programmes, consultancy, and technology services.

The company is looking for innovative, talented, and driven individuals to join a successful team that has great growth ambitions. You will play a crucial role in supporting businesses across various industries on their path to digitalisation in multimillion pound transformation projects.

Currently, P2D is working to revolutionise the supply chain and logistics industry. We enable supply chain transparency and provide real-time data on sustainability, fair-trade and carbon usage through cloud hosted data environments, micro services, android and IOS applications. The platform creates transparency and agility within the supply chain and simplifies Customs and SPS requirements to support the movement of goods globally. Clients include major international retailers across the Food, FMCG and Pharmaceutical industries and one of the world's leading facilities management companies. We work closely with UK and EU government bodies, including HMRC and DEFRA and are currently developing regulatory platforms that facilitate trade and support the free movement of goods with a focus on the risk-free movement.

The company is engaged on an expansion program and is looking for talented, progressively minded candidates to join a growing successful team. We focus on the development of our employees, ensuring that they have every opportunity to grow and further their skill set.

To apply for this role please email your CV to info@p2dl.com siting the job title in the subject.
