

P2D Platform Release Notes Sprint 33

If your PC has not been restarted after the software has been deployed, please ensure you do this or refresh your browser.

The following updates have been included in the upcoming release to the P2D platform:

New dropdown EU to EU Transit EHC - Type of Commodity

We have added a new multi select dropdown to the EU to EU transit EHC labelled 'Type of Commodity'. Here you will need to indicate all the applicable values that make up your product. Please ensure that your product is up to date with this new field before creating any further traces and if your product is a Composite, then you will also need to add the POAO content that applies (Dairy products/Egg Products/Fish Products/Meat Products).

The screenshot displays a form for creating an EU to EU Transit EHC. The form is divided into two main sections. The top section contains fields for: EHC Type (EU to EU Transit), Unique Product Code (UPC) (11002299), Description of Commodity (EU to EU Transit), Commodity Code (CN) (894327777), Temperature of Products (Chilled), Manufacturing Plant Establishment Number (MPEN), Manufacturing Plant Name (MPN), Units per Tray (1), Gross Weight (kg) per Pack (0.987), Net Weight (kg) per Pack (0.789), and Type of Packaging (ToP). The bottom section, titled 'EU to EU Transit', contains: Country of Origin (FR), Cold Store Approval Number (CSAN), Latin Species Scientific Name of Animal (Gallus gallus domesticus), and Type of Commodity. The 'Type of Commodity' field is a multi-select dropdown menu with a red arrow pointing to it. The dropdown menu is open, showing a list of options: Beef, Composite, Dairy Products, Dairy Raw, Egg, Egg Products, and Fish. The 'Composite' and 'Dairy Products' options are currently selected. Below the dropdown menu is an 'UPLOAD DOCUMENT' section with a dashed box and the text 'Click here or drag'.

RAG/OV Status change

As part of our ongoing development for User experience, we have simplified the way statuses are represented on the platform. For ease of use, both the traditional 'RAG status' and the 'OV status' are now depicted in one column. As shown in the image below, the first node will show the 'RAG status' of the trace and whether all data and documents are present. The second node will show the 'OV status' of the trace, with more detail present when you hover your cursor over the node.

Archive?	Unique Product Code (UPC)	Batch Identifier	Last Updated	Recipient	PO Number	Commodity Description	EHC Type	Number of Documents	Status

New free text field in EU to EU Transit EHC - IUUF Catch Certificate

We have added a new free text field in the EU to EU trace template, this is a variable data field so will need to be completed at trace level rather than product level. We have also included an 'N/A' tick box when a Catch certificate is not required for the trace.

IUUF Catch Certificate
