

P2D Platform Release Notes 15th of November

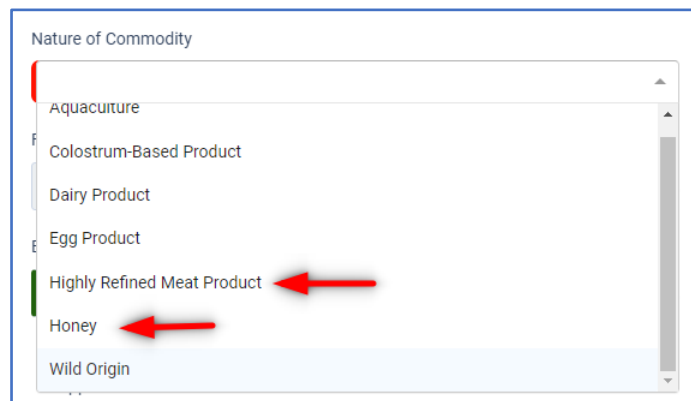

Please ensure you refresh your browser after the software has been deployed to view all updated features. If the updates are not visible, we recommend restarting your computer.

The following updates have been included in the upcoming release to the P2D platform:

'Highly Refined Meat Product' & 'Honey' added to Nature of Commodity in PA

To improve existing functionality and to meet with legislation, we have added a new option to the dropdown list for Private Attestations:

- ◆ Highly Refined Meat Product.
- ◆ Honey.

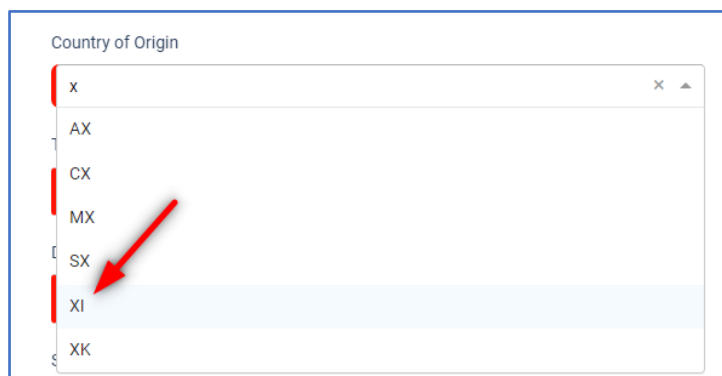

Please note that this will not change or override any existing traces already in the platform.

XI added to COO Dropdown List

To meet with legislation, we have added XI to the Country of Origin dropdown field on all EHC types. XI refers to Northern Ireland and is the compliant 'COO' value.

Please note that this will not change or override any existing traces already in the platform.

The Country and Region of Origin for the Meat Products pull through, within Composite Comp, has been Concatenated

We are also making a small change to the backing schedule, introducing the 'Region of Origin' for Meat Raw Materials within a Composite Comp. This is an improvement we are working on, but as a supplier this has no impact on your day-to-day operations.

Before;

U	V	W	X	Y	Z	AA	AB	AC	AD	AE
			Meat Products, Establishment Number (Approved Premises Number)	Meat Products, Origin Country Code	Meat Products, Species Code	Meat Products, Treatment Type	Meat Products, Abattoir Approval Number
