

P2D Platform Release Notes Sprint 41

Please ensure you refresh your browser after the software has been deployed to view all updated features. If the updates are not visible, we recommend restarting your computer.

The following updates have been included in the upcoming release to the P2D platform:

Egg Products - Removal of N/A tick boxes for Egg Treatment Types

We have removed the N/A tick boxes next to the egg products heat treatment type dropdowns. This has also been removed from the Raw Material and GEFS Raw Material EHC Types as well.

H.P.A.I. Treatment in Excess of
Newcastles Disease Treatment in Excess of

There is however an option within the Treatment dropdown menu for both HPAI and Newcastle Disease to cater for eggs collected from a disease free zone.

H.P.A.I. Treatment in Excess of
Newcastles Disease Treatment in Excess of

10% salted Egg yolk 62.2 Deg C for 138 seconds
Dried Egg white 54.4 Deg C for 50.4 hours
Dried Egg white 67 deg C for 20 hours
Liquid Egg White 55.6 deg C for 870 seconds
Liquid Egg White 56.7 deg C for 232 seconds
N/A Collected from a HPAI disease free zone
Whole Eaa Blends 60 dea C for 188 seconds

10% salted Egg yolk 55 deg C for 176 seconds
Dried Egg white 57 deg C for 50.4 hours
Liquid Egg White 55 deg C for 2278 seconds
Liquid Egg White 57 deg C for 986 seconds
Liquid Egg White 59 Deg C for 301 seconds
N/A Collected from a Newcastle disease free zone
Whole Eaa 55 dea C 2521 seconds

New Egg Product Field - Country (and zone if applicable) of origin of Finished Product

Due to legislative requirements we have added a new free text field called “Country (and zone if applicable) of origin of Finished Product”

This has been added as static data so you will need to update your product list for all that fall into the Egg or Egg products EHC type, regardless if they are a Raw Material or finished product. They have been added to the end of v1, v2 and EHC preview schedules. This field has been added into the Excel Product Upload and Download.

The screenshot shows the 'Egg Products' form with the following fields:

- Country of Origin *: GB
- Cold Store Approval Number *: N/A
- % of Egg *: 7
- Country (and zone if applicable) of origin of Finished Product *: (This field is highlighted with a red border in the original image)
- Latin Species Scientific Name of Animal *: Gallus gallus domesticus
- Other:

Private Attestation - Composite Attestation simplified

There is a new EHC type available as we phase out the Composite Attestation EHC. We have introduced the Private attestation which operates much the same, but we’ve added 4 new free text fields with N/A tick boxes on the products page:

- ◆ Highly Refined Meat Products Establishment Number
- ◆ Fish Establishment Number
- ◆ Dairy Products Establishment Number
- ◆ Egg Products Establishment Number

Fish Establishment Number, Dairy Products Establishment Number and Egg Products Establishment Number will fill out the fields that already appear on the backing schedule of the same names. Highly-Refined Meat Products Establishment Number will be a new column on the backing schedule, positioned next to the other 3.

Please note, if you have multiple establishment numbers for any of the four categories mentioned above, please comma separate them (Establishment numbers should be entered without spaces and using a comma to separate).

The screenshot shows the following fields for establishment numbers:

- Highly Refined Meat Products Establishment Number: N/A
- Fish Establishment Number: N/A
- Dairy Products Establishment Number *: GBWQ108, DEMV26001EG, BEM351CEG N/A (This field is highlighted with a red border in the original image)
- Egg Products Establishment Number *: GB8GG N/A

This change will remove the need for Raw Materials, meaning that if Raw Materials are added, the information does NOT get pulled through anywhere. However, we have kept functionality for Raw Materials to be added.

For anyone who is affected by this change you will be contacted by both M&S & P2D to help initiate the transition and we will not be turning off the old Composite Attestation until everyone is comfortable with this change. We would like to make it clear only the 1 trace is required, Suppliers can continue to use the Composite Attestation until they move to the Private Attestation option. There is no need to backdate any traces. No Raw Material traces are needed for the new Private Attestation, but a supplier declaration will need to be attached to the static data (product data) in order to turn the trace green. The declaration will need to be reviewed yearly or if the product and/or suppliers change or the regulation is updated. The supplier declaration will be available in Connect.

TRACE - Private Attestation
